Abstract (en)

[origin: WO2015075253A1] The present invention relates to a clasp (1), for a bracelet, comprising a device (42, 52, 58, 60, 76) for adjusting the useful length of the bracelet comprising a carriage (42) capable of sliding on the inside a frame (26) along the longitudinal direction of the bracelet, the carriage (42) carrying a longitudinal locking component (52), arranged to mate with a fixed indexing component (76) rigidly connected to the frame (26) and mounted on the carriage (42) in such a way that it is able to move between a first locking position, in which it mates with the indexing component (76), and a second adjustment position, in which it is outside of the range of the indexing component (76) to allow a movement of the carriage (42). The carriage (42) bears an elastic recall component (60) arranged to exert a force on the longitudinal locking component (52) and extending to position same in the locking position.
