Abstract (en)
[origin: WO2014016134A1] The present invention is in the field of stable detergent compositions; in particular liquid crystal ternary lamellar phase detergent compositions, for use in laundry and/or household cleaning amongst others. Efficient cleaning of fabric articles, especially the removal of soils such as sebum from cuffs and collars, remains to be desired. It is an object of the present invention to provide a composition that provides fast dissolution of fatty material based stains. It has been found that a lamellar phase detergent composition comprising a surfactant selected from non-ionic and anionic in a ratio of non-ionic:anionic between 3:1 and 1:4 and having HLB value of not less than 15; a fat solubilising oil and water, provides an effective solution that removes soils and/or stains of solid or solidified fatty material; is stable at normal storage and washing conditions and may be delivered as a pourable liquid.
