Abstract (en)

[origin: US2014032524A1] Providing an interface to request actions of a website includes various elements. For example, website instructions of the website are provided to a search engine, the website instructions describing the website tool. The website instructions may be indexed by the search engine to be referenced when servicing a search query. When the website is deemed relevant to the search query, a search-result snippet may be built to include the interface to the website tool. As such, the interface may be provided in the search-results webpage. The interface may be used in the search-results webpage or may be stored locally. The interface may be used to access the website tool without a browser navigating to a landing page of the website.
