Abstract (en)

[origin: WO2014012675A1] The invention relates to an HF coaxial cable that comprises a cable inner conductor and a cable outer conductor, as well as an angular plug connection at at least one of its two cable ends. A method is also described for producing same. The invention is characterised in that said HF coaxial cable is designed as a conventional corrugated sheath cable comprising a cable outer conductor, in the form of a metal corrugated pipe, to which a line impedance Z_k and a minimum bending radius $r_{k,min}$ are allocated; in that at the at least one cable end, said cable inner conductor is joined to an inner conductor of a straight plug connector and the cable outer conductor is joined to an outer conductor of the straight plug connector; in that said corrugated sheath cable has, directly or indirectly following the straight plug connector, a bend that has a bending radius r_a , where $0.2 r_{k,min} \leq r_a \leq 0.9 r_{k,min}$, which alters the line impedance Z_k by a maximum of 1 ohm; and in that the bend with the bending radius r_a is produced by cold forming said corrugated sheath cable with the introduction of bending forces and tensile forces directed along said corrugated sheath cable.
