Abstract (en)

[origin: EP2878785A1] System for pressurizing a cooling circuit of an internal combustion engine for industrial vehicles equipped with a compressed air tank (18) with relative pressure comprised between 9 and 13 bar, the cooling circuit comprising an expansion tank (12) partially filled with air in an upper part and partially filled with liquid in a lower part, the system comprising a pneumatic connection (10b) between said compressed air tank and said upper part of the expansion tank (12), wherein said pneumatic connection comprises one single regulating valve (10) of the mechanical type.
