Abstract (en)
[origin: WO2014019826A1] The invention relates to a revolver component (12) for a reagent vessel (10) for a centrifuge and/or for a pressure-varying device, having a revolver housing (12a), which can be inserted in the reagent vessel (10), wherein a guide structure (14), which can make contact by means of at least one raised portion (16) formed at least on a reagent vessel part (10a) of the reagent vessel (10) or on a further revolver component, or at least one raised portion (16), by means of which a guide structure (14) formed at least one the reagent vessel part (10a) or on the further revolver component can make contact, is formed on the revolver housing (12a) in such a manner that the revolver housing (12a) can be adjusted in relation to the at least contacted reagent vessel part (10a) or in relation to the further revolver component in a first part-movement (20) along an axis (18) and in a second part-movement (22) about the axis (18). The invention further relates to a reagent vessel part (10a) for interaction with the revolver component (12) and a reagent vessel (10).
