Abstract (en)

[origin: WO2014019866A1] The invention relates to a method for operating a vehicle (101), wherein during coasting of the vehicle (101), in order to reach a route position of a route still to be travelled at a desired speed that is less than a vehicle speed at the start of the coasting, an actual vehicle speed is compared with a target vehicle speed (501, 601) and an action is performed (502; 404, 405) depending on the comparison. This allows continuous adaption of the driving resistance such that the desired speed is reliably achieved. Disturbances such as wind or grade can be compensated. The invention further relates to a device (701) for operating a vehicle (101), and a computer program.
