Abstract (en)

[origin: WO2014019557A1] Method of controlling the flow of heating medium through a multiple row radiator, in particular through the heating plate unit with a inlet port (2) and an outlet port (3) for the heating medium, with the first medium-passing heating plate (4) facing the heated room / space and with at least one heating plate (5) situated behind said plate intended for reducing of the heating medium flow, in particular for its heating output reduction, characterized in that the heating medium supplied through a common inlet port (2) is distributed without restriction in individual heating plates (4,5), and then the heating medium returns through individual outflows to be selectively merged in a single outflow fixture emptying into the outlet port (3).
