Abstract (en)  
[origin: WO2014019750A1] The invention relates to a method for determining a preferred route (214) between a starting point and a destination. Said method comprises: a step of detecting, by y user, an intermediate destination input relating to a digital map (200), said intermediate destination input representing a desire of the user to drive through a preferred region displayed in the digital map (200) between the starting point and the destination; a step of assigning the intermediate destination input to a road network region (212) underlying the preferred region in the digital map (200); and a step of using at least one route segment (216) contained in the road network region (212) in a process for determining a route between the starting point and the destination in order to determine the preferred route (214).
