Abstract (en)

[origin: WO2014019819A1] The present invention concerns a wristwatch (1) comprising a watch case (201); a watch movement (205) inside said watch case; and a dial (204). At least one portion of a three-dimensional character (20) above said dial can be moved in a plane non-parallel to the dial, by means of a pin (21, 210) extending above said dial (204), in a direction perpendicular to the dial. A device for driving the character (1) is disposed under the dial to control the movements of this pin. The character can consist of a mechanical bird.
