Abstract (en)  
[origin: WO2014023416A1] The invention relates to a manual control element, particularly for a construction machine. Essential elements of the manual control element are a bearing support and an operating lever with at least one switching element, which operating lever protrudes from the bearing support. The operating lever comprises an operating lever arm and a support element. The switching element is arranged between the operating lever arm and the support element in such a manner that it can be reached from at least two different positions of the operator's hand.
