Abstract (en)

[origin: WO2014020034A1] The invention relates to a wiring device (34) for wiring an electronic apparatus (14) comprising an interface (42), a conductor track (40) and a component fitting island (38) that is connected to the interface (42) via the conductor track (40) and that is set up to carry an electronic component (26, 28) and to make electrical contact with the interface (42) via the electrical conductor track (40), wherein the component fitting island (38) is free of a web element (58) that is set up to hold the component fitting island (38) on a support element (56) during a housing process housing the component fitting island (38).
