Abstract (en)
[origin: EP2881507A1] There is provided a method for knitting a knitted fabric capable of knitting a bind-off processing portion having an appropriate stretchability and having a sufficient strength. Performing a tubular knitting at least once to knit a tubular stitch row (1) comprising front stitches, and overlapping some stitches of the tubular stitch row (1) with stitches of the base portion (9) are repeated. In the repetition, a new tubular stitch row (11) is knitted continuing in a wale direction of an existing tubular stitch row (10) to join the existing tubular stitch row (10) to the base portion (9). When knitting the tubular stitch row (1), in the tubular stitch row (1), a center position in a knitting width direction of a stitch row (1y) knitted with a needle bed (FU) on a side opposite to a side where a base section (91) is held is shifted toward a direction opposite to a direction of moving the tubular stitch row (1) to overlap with the base section (91), with respect to a center position in a knitting width direction of a stitch row (1x) knitted with a needle bed (BD) on the side where the base section (91) is held.
