Abstract (en)
[origin: EP2881512A1] A clothes dryer according to the present invention includes a drying chamber accommodating clothes, a loading port through which clothes are loaded into and removed from the drying chamber, a door that closes the loading port, and lint filter (510) that is detachably attached to the door. Door (120) includes accommodating unit (121) that is disposed opposed to the loading port and that accommodates lint filter (510), lint filter (510) and accommodating unit (121) are connected with each other via a sealing unit, and the sealing unit is inclined with respect to a vertical direction. This structure provides a clothes dryer which prevents deterioration of drying performance caused by leakage of drying air from lint filter (510).
