Abstract (en)

[origin: WO2014026084A1] An alignment guide includes a main body sized and shaped to contact the proximal end of a tibia, and a retaining guide coupled to the main body. The retaining guide includes guide surfaces and is adjustable relative to the main body such that an operator can intra-operatively adjust the position of the guide surfaces relative to the main body to capture the anterior and posterior cruciate ligament between the guide surfaces.
