Abstract (en)

[origin: WO2014023901A1] The invention relates to a structural part made of a composite material, such as a rail (3) for a slidable cowl of a thrust reverser of an aircraft engine nacelle, said part including a main portion made of a composite material and defining a groove shape, and a reinforcing portion (15) made of a composite material which is provided at the bottom of said groove and which defines a bearing surface (17) at the bottom of said groove.
