Abstract (en)

[origin: WO2014023427A1] What are described are liquid compositions comprising a) one or more anionic surfactants and b) one or more nonionic surfactants, which are characterized in that the surfactants of components a) and b) are present in a total concentration of > 25% by weight, based on the total weight of the liquid composition, and are free of alkanolamines and salts thereof. The liquid compositions, when combined with bleaches, show a distinctly higher bleaching performance than comparable alkanolamine-containing compositions.
