Abstract (en)

[origin: WO2014023371A1] The invention relates to a method for operating a blower lance arrangement, in which method hot blast is blown onto the melt bath and/or the bulk material bed in a converter, wherein the hot blast lance is fed via a hot blast line from a hot blast source, according to the preamble of claims 1 and 8. In order to achieve a more effective blowing method and to improve the blower lance in terms of the coupling with the hot blast source, according to the invention the hot blast lance is detachably connected to the hot blast source in such a manner that the connection can be automatically detached and reconnected for each batch, i.e. between the batches.
