Abstract (en)

[origin: WO2014023587A1] The invention relates to a method for operating a heating device (9) of a domestic refrigerator (1) which has a housing (2) comprising a coolable interior (3) and at least one lateral wall (8) and which has a heating device (9) that is thermally coupled to the lateral wall (8) surface directed outwards. The invention further relates to a corresponding domestic refrigerator (1). A specification of a humidity range assigned to the humidity of the surroundings of the refrigerator (1) at the installation site of the refrigerator is set in particular by means of an input device (13) of the domestic refrigerator (1), and the heating device (9) is operated dependent on the set specification of the humidity range.
