Abstract (en)

[origin: WO2014023808A2] The invention concerns methods for predicting whether a cancer patient will respond to therapy, of monitoring efficiency of a treatment of cancer, for determining a therapeutic regimen suitable for treating a subject suffering from a cancer, said methods comprising determining the level of expression of at least one gene selected from a panel of markers in a biological sample from the patient. The present invention further concerns a kit comprising means for detecting said panel of markers.
