Abstract (en)

[origin: CA2872418A1] The invention relates to a processing system (1) and to a method for processing in particular pharmaceutical powders. The processing device (5) comprises a plurality of converting stations (41, 42) which are employed in a cyclical manner. The processing system (1) displays at least one first zone (I) and one second zone (II), wherein each zone (I, II) is in each case assigned at least one converting station (41, 42) of the processing device (5). A cleaning tunnel (44) which transgresses at least one converting station (42) of the second zone (II) is disposed in the second zone (II). A first end (45) of the cleaning tunnel (45) adjoins the first zone (I). A suction installation (6) is disposed in the region of an opposite second end (46) of the cleaning tunnel (44). By means of the suction installation (6), a purifying-gas stream (56) is generated in the cleaning tunnel (44).
