Abstract (en)
[origin: EP2883833A1] A valve for dispensing a carbonated beverage, particularly beer, comprises a housing (1) with an inlet passage (2) for liquid, a valve chamber (4) with a valve body (3) interacting with a valve seat (7) and laterally directed discharge outlets (10). The valve body (3) is slidably seated in a hole (9) at the bottom of the housing (9). A valve stem (6) can be actuated by a bottom of a glass such that the valve body (3) allows passage of beverage through the chamber (4), leaving through the outlets (10). The device according to the invention is peculiar by having throttle means (20) that can be manually adjusted so as to partially cover the discharge outlets (10). Hereby the degree of foaming of the beverage can be controlled according to wish and according to the nature of the beverage.
