Abstract (en)
[origin: EP2883989A1] A clothes treatment device according to the present invention includes a housing tub for housing clothing, and a steam supply mechanism for supplying steam to the housing tub. The steam supply mechanism includes a steam generator having a wall surface which defines a chamber for generating steam, a heater for heating the wall surface, a water supply mechanism for injecting water to the wall surface, a nozzle (352) mounted on the housing tub, an impurity removing part (600) having an open hole formed on the nozzle (352), and a guide pipe which guides the steam to the nozzle (352) from the steam generator. In the steam supply mechanism, the steam injected from the nozzle (352) is supplied to the inside of the housing tub through the impurity removing part (600). Accordingly, the clothes treatment device which can properly remove an impurity contained in the steam can be realized.
