Abstract (en)

[origin: CN104863478A] The present invention relates to a seal apparatus which in particular comprises at least one fixing angle plate for fixing the seal apparatus to a raised ridge of a groove so as to restrain a casing of the seal apparatus within the raised ridge of the groove. The seal apparatus includes the casing and at least one fixing angle plate to fix the casing so as to fix the seal apparatus to a door leaf or similar object. The seal apparatus is characterized in that: the seal apparatus has at least one edgefold through which the seal apparatus is located so that the casing does not protrude out of the edge of the groove or only protrudes a very small bit after the mounting of the seal apparatus to the door leaf. The seal apparatus herein has the advantages of accurate location, easy mounting and dismounting.
