Abstract (en)
A crown-type glazing strip, for sealing between a window sash and a window pane, comprises a pair of side ridges (18a-b), extending along the length of the glazing strip (10), for sealingly abutting a face of the window pane; and an intermediate ridge (20), located between the side ridges (18a-b) and extending along the length of the glazing strip (10), for sealingly abutting said face of the window pane, wherein at least a portion (19a-b) of each side ridge (18a-b) consists of cell rubber of a first density; at least a portion (21) of the intermediate ridge (20) consists of cell rubber of a second density; and said first density is higher than said second density.
