Abstract (en)

The invention relates to so-called Circulating Fluidized Bed Apparatus (CFBA) comprising a circulating fluidized bed reactor (10) with at least one outlet port at its upper part, wherein said outlet port allows a mixture of gas and solid particles exhausted from the circulating fluidized bed reactor (10) to flow into at least one associated separator (18) for separating solid particles from said gas, means to transfer said separated solid particles into at least one fluidized bed heat exchanger (24) and return means to transport at least part of said the solid particles back into the circulating fluidized bed reactor (10), wherein the circulating fluidized bed reactor (10), the separator (18) and the fluidized bed heat exchanger (24) are mounted in a suspended manner.
