Abstract (en)
[origin: WO2014027005A2] The invention relates to a burner (10) for producing hot gas and has a flame tube (12) that can be connected to a turbine. The burner (10) includes an air guiding device (14) surrounding the flame tube (12) and having a flow path (21) for air. The burner (10) has a burner head (16) mounted on a base (34) and having a plurality of nozzle channels (20) communicating with the flow path (25) for air in the air guiding device (14) in order to supply fuel mixed with air to the combustion chamber (12). A fuel nozzle (17) mounted on the base (34) protrudes into each of the nozzle channels (20). To be supplied with fuel, the fuel nozzles (17) are connected to an annular channel (52) which is formed in the base (34) and can be connected to a fuel supply line. According to the invention, to be supplied with fuel, the fuel nozzles (17) are connected to an annular channel (52) which is formed in the base (34) and can be connected to a fuel supply line.
