Abstract (en)
[origin: WO2014029744A1] In a method for executing a financial transaction by a financial service provider, a mobile customer device (101) and a mobile or stationary dealer system (103) are connected to a management server (104) of a financial service provider system (100) by means of a communication network (105). After the dealer system (103) and the customer device (101) have been registered and an identification number assigned to the customer device (101) has been input, the dealer system (103) sends transaction data to the financial service provider system (100), which produces a unique transaction code by means of a random generator (107) and sends the unique transaction code to the dealer system (103). The customer must input the unique transaction code into the customer device (101). After the transaction data transmitted by the dealer system (103) have been checked and confirmed by the customer, the financial transaction is executed and a notice of the successful execution of the transaction is sent to the customer device (101) and the dealer system (103).
