Abstract (en)

[origin: WO2014027193A1] Methods and systems for providing gambling games to users wherein the games are not tied to a particular gaming operator. Specifically, in the methods and systems described herein a third party gaming system provides central access to a library of gambling games offered by a plurality of gaming operators. Players connect to the third party gaming system and select a game from the library of gambling games. Once a player has selected a game, the third party gaming system provides the player with a game client for the selected game and operator configuration parameters for a suitable gaming operator system. The game client then dynamically reconfigures itself using the configuration parameters to connect to the gaming operator system to play the game. In some cases after the user has selected a game they are provided with a list of gaming operators that offer the selected game and the player can select which operator that they wish to play with. To be accompanied, when published, by Figure 1 of the accompanying drawings.
