Abstract (en)
[origin: CN104726974A] The invention provides a spinning machine, especially a ring spinning machine, which comprises a plurality of adjacently arranged drafting arrangements in a punch (12), a driven lower cylinder, and an upper roller controlled by a shuttle carriage and arranged on the lower cylinder to press against the lower cylinder so as to form a nipper bite. Within the main drafting zone of the drafting arrangements, a guide device (1) is arranged on each of bottom and top aprons (6, 7). The guide device (1) conveys a doubling thread belt (13) driven by the drafting arrangements along the running direction for a roller pair (3) by means of a guide table (10) of a bottom apron (7). The guide table (10) is extended along the plurality of drafting arrangements. A corresponding guide table receiving element (11) is provided with a contact surface (11.2) fixed on the punch (12), and a receiving part (11.1) that acts together with a corresponding access element (10.1) on the guide table (10).
