Abstract (en)

The invention relates to a stacking unit of slats on a support ladder provided with double crossbeams for the production of Venetian blinds. The unit comprises: - a sliding lane C which extends along a longitudinal extension axis X on an insertion plane m and along which a slat L is made to slide; - a device for positioning a ladder S on a positioning plane p orthogonal to the insertion plane m of the slat and transversal to the longitudinal axis X and to the sliding lane C. The unit 1 comprises means 10 for locally moving a slat L along a longitudinal axis X next to the positioning plane p of the ladder, once the slat has been inserted in a pair of crossbeams of the ladder. The present invention also relates to an attachment method of a slat to a ladder for the production of Venetian blinds.
