Abstract (en)
A screening arrangement (1) for a window, the screening arrangement (1) comprising a bottom element (4), two side rails (1, 2), and a sliding device (6) arranged on one of the two side rails (1, 2) such as to be displaceable in a longitudinal direction of the side rail, the bottom element (4) being movable with respect to the two side rails (1, 2) between a first non-screening position and a second screening position by means of an electrical drive means, the screening arrangement further comprising at least one bottom element positioning device (7, 8, 9, 10, 13a, 13b, 13c, 14, 16, 17) adapted for causing the bottom element (4) to stop when the bottom element (4) and the sliding device (6) are located in a mutually overlapping position.
