Abstract (en)

[origin: WO2014029627A1] The invention relates to a melt-spinning method and a melt-spinning apparatus for producing a crimped yarn. In this case, by spinning a plurality of filaments, at least one filament bundle is produced from a thermoplastic polymer, cooled, drawn and compressed by means of an air stream in a stuffer box to form a yarn plug, wherein the yarn plug is disentangled to form a crimped yarn and wound up to form a package. In order to be able to set the tendency to shrink and the crimp stability independently of one another on the crimped yarn, according to the invention, prior to crimping, the drawn filament bundle is heated to a relaxation temperature for relaxation in a first heat treatment and to a crimping temperature for preliminary temperature control in a second heat treatment. To this end, at least one further treatment means for heat treatment of at least one filament bundle prior to running into the stuffer box is provided between a drawing device and a texturing device.
