Abstract (en)
[origin: WO2014029942A1] This analogue amplification device comprises -a first stage (28) with common-base transistor (36) receiving the modulated input current entering its emitter, and the output signal leaving this first stage corresponds to the signal of the collector, - a second stage (30) is formed by a follower amplifier comprising a transistor (38) with common drain or collector setup, a third stage (52) comprises a transistor (40) with common emitter setup, and - a fourth stage (34) is an amplifier stage with means making it possible to carry out, on the one hand, an amplification and, on the other hand, a matching of impedance. Application to a laser anemometer with optical retro-injection.
