Abstract (en)

[origin: CN204483369U] The utility model relates to a haircutting device (1) used for hair shaping. The haircutting device comprises two arms (2, 3), at least one hair processing accessory (9, 10) and a locking mechanism (15), wherein the two arms are installed on a hinge (4), at least one of the two arms comprises a heating plate (5, 6), the arms are configured to form a clamp, and the clamp enables the heating plates (5, 6) to shape hair; the at least one hair processing accessory is assembled to at least one arm (2) of the two arms in a sliding connection manner, the arm (2) comprises grooves (16, 16', 18) arranged in the longitudinal axis, and the grooves are used for receiving and holding the accessories (9, 10, 16, 16'); and a fixed the locking mechanism is allowed to have a fixed working position on one hand, and on the other hand, the locking mechanism is allowed to be away from the working position, according to the condition that the working position is fixed, the at least one hair processing accessory (9, 10) is locked in the grooves (16, 16', 18), and according to the condition that the locking mechanism is away from the working position, the at least one hair processing accessory (9, 10) is away from the arm (2). The locking mechanism (15) comprises at least one part (16, 16') which is flexibly installed to the accessories (9, 10) or the groove (18). The parts (16, 16') are used for respectively being abutted against one part of the accessory or one part of the groove so as to limit a plastic-metal abutted surface (SA).

Abstract (fr)

L'invention concerne un appareil de coiffure (1) destiné à la mise en forme des cheveux, comprenant - deux bras (2, 3) montés sur une charnière (4) dont au moins un comprend une plaque chauffante (5, 6), lesdits bras étant configurés pour former une pince permettant à ladite plaque chauffante (5, 6) de mettre en forme les cheveux, - au moins un accessoire (9, 10) de traitement des cheveux destiné à être assemblé en liaison glissière sur au moins un (2) des deux bras, ledit bras (2) comportant une rainure (16, 16', 18) dans l'axe longitudinal du bras destinée à recevoir et maintenir ledit accessoire (9, 10, 16, 16') - un moyen de verrouillage (15) permettant, d'une part, une position de travail attachée selon laquelle l'au moins un accessoire (9, 10) est bloqué dans la rainure (16, 16', 18) et, d'autre part, une position de travail détachée selon laquelle l'au moins un accessoire (9, 10) est détaché du bras (2), ledit moyen de verrouillage (15) comprend au moins une pièce (16, 16') montée flexible sur soit ledit accessoire (9, 10) soit ladite rainure (18), ladite pièce (16, 16') étant destinée à venir en appui contre respectivement soit une partie de l'accessoire soit une partie de la rainure pour définir une surface d'appui (SA) plastique - métal.
