Abstract (en)
[origin: EP2889566A1] A refrigeration device and a door structure for the refrigeration device are provided. In the door structure, an opening (10) of a door housing (1) is provided on a side panel (12) and a front panel (11) which are connected to each other; after a recessed groove (20) of a door handle (2) is placed into the opening (10), a flange (21) along an opening of the recessed groove (20) is connected to the front panel (11) and the side panel (12) by an insertion-receiving structure, where the insertion-receiving structure limits the door handle (2) at least in two perpendicular dimensions of a surface of the front panel (11) and in a third dimension perpendicular to the surface of the front panel (11), or limits the door handle (2) at least in two perpendicular dimensions of a surface of the side panel (12) and in a third dimension perpendicular to the surface of the side panel (12). The door structure in the refrigeration device can position the door handle in all three dimensions of a three-dimensional coordinate system, thereby enhancing the firmness of the door handle.
