Abstract (en)  
An electromagnetic relay (1) includes a slide switch (2). The slide switch (2) includes a cover (70), and a slide lever (80) and an elastic test button (90) each housed in the cover (70). The cover (70) has an operation hole (71) formed in an opposite surface to one surface of a case (40). The operation hole (71) allows the sliding operation of the slide lever (80). The slide lever (80) is disposed to block the operation hole (71). The elastic test button (90) presses the slide lever (80) to bring the slide lever (80) into press contact with a ceiling surface (70b) of the cover (70). The slide switch (2) of the electromagnetic relay (1) inhibits the entry of foreign matters into the case (40), and prevents a contact failure or an actuation failure.
