Abstract (en)

[origin: WO2014033228A1] The present invention concerns a flexible container (1) for transporting and dispensing one or a plurality of liquid products, comprising: - at least two stacked flexible walls (2) linked together at least at the periphery thereof, said walls (2) linked in this way defining an internal volume (3) capable of receiving one or a plurality of liquid products having biocide properties, - an upper portion (4) and a lower portion (5), said internal volume (3) being positioned between said upper portion (4) and lower portion (5) of said container, - at least one member for accessing said internal volume (3) capable of bringing the internal volume into fluid communication with the outside of the container, - a readable data carrier (10), characterised in that it further comprises a ventilation means for ventilating said container (1) capable of allowing an intake of air into the container, said ventilation means being positioned on one of said flexible walls (2) or on said at least one member for accessing said internal volume (3); said ventilation means comprising an air-permeable membrane. The present invention also relates to a method for decontaminating or sterilising a volume or a surface using a container filled with a liquid such as a biocide.
