Abstract (en)

[origin: WO2014032067A1] The invention relates to a blocking device for firearms (1), wherein a locking unit (5) is mounted on the firearm (1), wherein the locking unit (5) comprises at least one blocking mechanism (8) and at least one activation element (9), wherein the activation element (9) is coupled to the shot-triggering mechanism (22) of the firearm (1) in such a manner that in a blocked position or blocked state (39) of the activation element (9) the shot-triggering mechanism (22) is blocked for triggering a shot, and in an active position or active state (38) of the activation element (9) the shot-triggering mechanism (22) can be released, wherein the activation element (9) can be brought into the active position or active state (38) only by using an unlocking element (4).
