Abstract (en)

[origin: EP2892043A1] The invention relates to a device for identifying garments, comprising a first element having an outer region decorated with aesthetic patterns and a second element to which the first element joins mechanically through the fabric of the garment in such a way that said outer region of the first element is oriented towards the outside of the garment. Said device is characterised in that it uses a tongue-and-groove-type connection system between the constituent parts thereof.
