Abstract (en)

[origin: WO2014032807A1] The invention relates to a connecting structure (3) between construction elements (1, 1') and to a construction element (1, 1'). The connecting structure (3) according to the invention has a relatively simple structural design so as to be easily producible and releasable. Furthermore, the connecting structure allows a quick modification of the orientation of the construction elements (1, 1') relative to one another. In the process, an energy and/or information transmission is allowed between the construction elements (1, 1') at the same time.
