Abstract (en)

[origin: GB2505536A] A child seat comprising a base 11, a resilient seating member or ball 12, and a retaining frame 13 pivotably connected to the base and configured so that the resilient seating member can be retained between the base and the retaining frame. Also, a bracket for coupling a child seat to an object or device, such as an auxiliary wheeled platform P of a pushchair. The bracket comprises first and second members which are adjustably connected so that the distance between the members can be adjusted to secure the bracket to the object or device. One of the members includes a coupling element to receive a cooperating coupling member of a child seat to be attached to the bracket.
