Abstract (en)

[origin: WO2014023900A1] A device (1) for heating at least one component (21), the device (1) comprising: - a pipe (2) capable of conveying a reaction fluid, - a reactor (3) capable of receiving a reagent likely to cause an exothermic reaction with the reaction fluid, the reactor (3) comprising at least one inlet for reaction fluid linked to the pipe (2) and at least one outlet for reaction fluid linked to the pipe (2), and - a circuit (10) for regenerating the reagent, the device comprising a generator (4) configured to generate a pressure lower than that inside the reactor (3) in an area of the pipe (4).
