Abstract (en)

[origin: WO2014037369A1] The invention relates to a stop arrangement for a position-changeable element, on a vehicle body, comprising, in particular, a stop element which can be connected to the position-changeable element or to the vehicle body by means of a plug-rotary-connection. Said plug-rotary-connection also comprises means which cause the stop element to clamp radially. The above-mentioned means can be designed such that radial clamping causes the stop element to centre radially.
