Abstract (en)
[origin: WO2014033593A2] The invention proceeds from a domestic appliance apparatus (12), more particularly a hob apparatus with at least one light-guiding element (17, 33, 39) and at least one sensor unit (20), which has at least one light sensor (22, 24) and is provided to detect light transmitted by the light-guiding element (17, 33, 39) and determine at least one temperature characteristic. In order to make possible improved temperature measurement it is proposed that the sensor unit (20) has at least one further sensor element (40, 42, 44) which is provided to determine at least one characteristic of the at least one light-guiding element (17, 33, 39).
