Abstract (en)

[origin: EP2894130A1] The invention relates to processes for purifying wastewater generated in the production of melamine from urea using techniques that involve the use of aqueous solutions of alkali metal hydroxides in order to purify and separate melamine. The invention can be used in the industrial production of melamine. The process for purifying melamine production wastewater involves the thermal hydrolysis of the wastewater at a temperature of 190-245°C, wherein steam having a temperature 5-60°C greater than the working hydrolysis temperature is bubbled through wastewater, preferably in an amount equal to 5-20% of the amount of unpurified wastewater. The technical result which can be achieved using the invention is an increase in the level of purification of the wastewater and a simplification of the technique.
