Abstract (en)
[origin: EP2894260A1] In a combined steel wall, a maximum interval L (mm) as a center distance between first and second steel pipes which are adjacent to each other and between which a center distance is the maximum distance, a height H (mm) of the wall body, and a dimension D (mm) that is the sum of radii of the first and second steel pipes satisfy the following formula (1). [Formula 1] $D \leq L \cdot \frac{1}{2} \times H$
