Abstract (en)
[origin: WO2014042614A1] Polymer films having hollow microspheres to simultaneously reduce the coefficient of friction and residue on ignition, and methods of making films and containers from the films. In a general embodiment, the present disclosure provides a film including at least one layer having hollow microspheres mixed within the layer. The microspheres can be in a concentration ranging from about 250 ppm to about 750 ppm within the layer.
