Abstract (en)

[origin: WO2014040896A1] The invention relates to a rail vehicle having crash equipment, comprising an underframe (2) and a driver's cab, wherein at least one control panel (1) is provided, which is detachably connected to the underframe (2) and which comprises a reinforced frame for absorbing the longitudinal compressive forces (F1, F2) occurring during a collision and transmitting said longitudinal compressive forces to the underframe (2).
