Abstract (en)

[origin: WO2014040861A1] The invention relates to a device for activating and deactivating a catching device of an elevator cab during the installation of an elevator system, wherein the device has an actuating element (1, 1'), which is designed to be fastened to a cab (30), wherein in a first position (P1), the actuating element (1, 1') acts on the catching device (40) in such a way that the catching device is activated, and wherein the actuating element (1, 1') can be brought into a second position (P2) when actuated by an installer, in which second position the actuating element does not act on the catching device (40).
